# Studio collection

The designs may look familiar, but the use of materials and finishes is certainly different! This contemporary new range offers the unique and exciting combination of chrome and black finishes to add even more style.

## Cleaning and care

The new Astracast colour match and volcano black match and volcano black taps will keep their remarkable looks for many years when cared for correctly.

To clean the tap use a good quality washing up liquid and a soft damp cloth or sponge. Then wipe over the tap with clean warm water and, importantly for a smear-free finish, wipe dry with a soft, dry clean cloth.

## Please note

Never use scouring powders or any other harsh, abrasive or caustic substances to clean taps.

## The perfect complement

Why not team your new colour match or volcano black tap with one of the matching volcano black sinks from the Astracast Studio Collection? This collection is shown on pages 60 - 63. In the example above we have combined the Ariel colour match tap with a 1.5 bowl metallic volcano black sink to stunning effect.

Or for a really striking alternative take a look at the latest stainless steel sink designs.

Either way, these stylish sinks and taps are sure to keep the kitchen looking cool when everything else is coming to the boil!

## Please note: Finesse

Unlike the colour match models shown above, this model has an almost completely volcano black finish.

There is also a Finesse Pull-out model available, not shown here.
